RESTRICTION

1. Restriction to one of the following inventions is required under 35 U.S.C. §121:
 - I. Claims 1-16, drawn to methods of genotyping, classified in Class 435, subclass 6.
 - II. Claims 17-20, drawn to a marker, OPRM1 +118A allele, used to screen for the development of substance dependency. Markers are classified in Class 536, subclass 23.5.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product of invention II can be used in a materially different process such as for the synthesis of proteins or the synthesis of nucleic acids or for the treatment of disorders.

Because these inventions are distinct for the reasons given above and have acquired a different status in the art as demonstrated by their different classification and recognized divergent subject matter and because inventions I and II would pose a serious burden on the examiner and therefore restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

A telephone call was made to Amy E. Rinaldo on April 4th 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.
